Qualcomm Israel is looking for SW ENGINEER for the Security team

Make a difference.

Your code will matter - to the security of your mobile device, to your connected car and to your smart home.

When you join our talented security team in Israel, you will be responsible for the design, development, and integration of the next generation security features. At Qualcomm, you will dive into the very heart of our leading System-on-Chip (SoC) solutions, from silicone layer to cloud-based services.

To succeed at your work you must be self-driven, a good team player, have a keen curiosity and strong problem-solving skills. You should also be able to effectively communicate your ideas to our multinational teams and partners around the world.

Looking for a senior-level software engineer with the following skills:
- Strong background in embedded software development in C/C++
- B.Sc. or M.Sc. in Computer Science or Electrical Engineering. AVG 83+

Further advantages:
- Applied Cryptography (algorithms, protocols, key management, PKI)
- Secure coding
- Knowledge of Trusted Execution Environment (Trust Zone is preferable)
- Knowledge of secure hardware (Smartcard/UICC/SE/CC/EAL/JavaCard)
- Linux kernel and driver development
- Low-level Android native, services, binder, HAL
