Full Stack Engineer
* Hiring via Sqlink *

Your opportunities to make an impact start here
If you are looking to inspire others through innovative user experiences that balance business needs and customer expectations, this job description is written for you!

In this role, you will be able to function as a senior developer, technically leading major development applications and components, used by internal customers and deployed to offline/site facing production systems. You will have great responsibility while managing sensitive production systems and you will be able to learn new domains and technologies.

What shall you bring to the table?
If you have excellent communication skills in English, and if you are flexible to move from one task to another, and familiar with Agile methodologies, we’d be happy to see the following competencies as well:

- 5+ years of hands-on experience building web technologies and services (e.g. Java/C#, etc.) along with browser technologies (AngularJS, HTML, CSS, Javascript, etc.).
- Expertise in Java.
- Proven results-orientation with a focus on delivery in a high-velocity and high-availability environment.
- Advanced knowledge of model-view-controller (MVC) and object oriented design paradigms.
- Experience in AngularJS 1.5, Oracle/ Mongodb (or other NOSQL db’s), REST, HTML5, CSS3, JQuery is highly desirable.
- Excellent analytical and problem solving skills.
- BSc. in Computer Science or equivalent.
- Proven record of accomplishment of successful deliveries and building large-scale systems.

Advantages
- Familiar with JavaScript build tools, such as NPM, Gulp.js, and Grunt.
- Experience with TDD.
- Experience with eCommerce world.
