

eBay Israel R&D Center presents: DevOps Engineer Intern wanted. Will it be you?

“The best challenges I’ve ever come across with” (Roni, SW Eng.)
“We don’t have big data, we have HUGE data.” (Chen, Researcher)
“Scalability like never seen before!” (Elad, Tech Lead)

Join us for a packed adventure on the cutting edge of technology, and you will make eBay a better platform for buyers and sellers.

The DevOps Team

DevOps is a culture of collaboration, knowledge sharing and automation focused around methodologies, best-practices and tooling required for smooth process of releasing quality code from the developer all the way to a working production environment.

What you will do in this role:

You will learn to work with new tools that will make you a better engineer moving forward. You will also enrich the monitoring platform to support all production-monitoring aspects: Heartbeat, transactions, dashboards, alerts, triage, and remediation tools.

What shall you bring to the table?

If you are a creative, passionate and innovative student with excellent English, we would be happy to see the following skills as well:

- Scripting language (Python/Bash/Shell)
- Java (an advantage)
- Familiarity with Linux (Ubuntu)
- Comfortable working in multi-disciplinary environment (Windows/Linux)
- Familiarity with source control tools (Git)

What should you do now?
