

Student position at Intel Israel Development Center in Haifa

Job description:

The candidate will work on a Machine Learning (ML) tool and its applications to design & silicon validation and optimization. Some of the used methods will require combining ML with Logical analysis. The language for tool development and integration into application flows will mainly be Python.

Required Skills:

The candidate should ideally have a background both on Machine Learning and Logic. Some basic knowledge in ML is required and a good knowledge in Logic will be an advantage. Basic knowledge in Python is also required. The student should have at least 1.5 years before completing the university degree.

Contact in the Technion:

Noa Mor, Director of External Relations

Contact at Intel (to submit a CV):
