**Software QA Engineer, PowerFlex**

Welcome to the cutting edge of Enterprise Software Defined Storage (SDS). At PowerFlex, we are transforming organizations with Software Defined Storage for the modern data center. We are a team of forward-thinking enthusiasts, driving our customers’ success with a strong customer focus and fast-paced culture. PowerFlex is a market-leading group within the #1 IT company in the world that promotes new ideas and has a startup mentality. We are passionate about our technology and strive to push the industry and community forward through our innovations.

If you are passionate about data-center and storage technologies, want to drive a change in modernized IT environments, and have a proven track record of success – we would love to meet you!

Join us as a **Software QA Engineer** on our **QA core team in Haifa** to do the best work of your career and make a profound social impact.

**What you'll achieve**

As part of our QA core team at PowerFlex you will work in a very dynamic and challenging environment with the best in class specialists across the globe.

**You will:**

- Everyday work on adding new automated test scenarios (Python), maintaining continuous test execution, tracking test cycles execution results, recommending corrective actions, and working with the development engineers on resolution of problems
- Isolate, reproduce and track bugs and verify fixes
- Maintain and modify test environment and configurations as needed, create new test environments and configurations to meet test cases or problem recreation requirements
- Document test results and manage and maintain defect and test case databases to assist in the continuous improvement and modification of software
- Work effectively with cross-functional and/or cross-geographic teams, readily share information with others

**Take the first step towards your dream career**

Every Dell Technologies team member brings something unique to the table. Here’s what we are looking for with this role:

**Essential requirements**

- BS or MS in computer science or related technical discipline
- High coding ability, preferably in Python (other languages are advantage)
- High troubleshooting and analytic skills.
- Proficiency in communication in English, good oral and written communication skills
- Deep understanding of software testing methodologies and lifecycle.

**Desired Competencies**

- Knowledge and experience with Linux operating system. Additional OS’s and virtualization solutions – an advantage
- Experience with storage solutions (filers, block storage, replication, etc. from any vendor)
